We are using nanotechnology based fuel additive, F2-21 eefuel, manufactured by H2OIL Corporation, USA and supplied by Meridian Speciality Technologies Pvt. Ltd., in our 750 & 320 KVA DG set since March 2011.

The additive is added at 100 ppm (1 litre additive in 10,000 liters of fuel).

We have observed a marked improvement in the unit generation per liter of fuel and reduction in smoke / emission level.

There is no harm or damage observed to the DG set and we are satisfied with the performance of the additive.

Regards

Amit Sharma
